RESEARCH INTERESTS

Reinforcement Learning, Self-supervised Learning

EDUCATION

University of California, San Diego 2016 - 2024
Ph.D. in Computer Science

Carnegie Mellon University 2013 - 2014
M.S. in Robotics

Nankai University 2009 - 2012
M.S. in Pattern Recognition and Intelligent Systems

Nankai University 2005 - 2009
B.S. in Software Engineering

WORK EXPERIENCE

Handshake AI Solutions, MOVE Fellow April 2025 – Present
• Contributing to a confidential research project focused on advancing the capabilities of cutting-edge LLMs in machine learning domains.

Snap, Research Scientist Intern Summer 2017
• Designed and developed a novel contrastive learning-based algorithm for logo detection in the wild, trained on a large-scale dataset of over 130K annotated images. This approach achieved 41% and 59% improvements in zero-shot and one-shot recall over standard classification methods.

SELECTED PROJECTS

University of California, San Diego, Graduate Student Researcher 2023-2024
• Designed and developed a novel probabilistic world model using contrastive learning. The learned latent space enables structure-aware exploration and task decomposition, and supports highly efficient planning without requiring any inference-time search.

University of California, San Diego, Graduate Student Researcher 2023
• Designed and developed a novel zero-shot prompting method that achieves up to 25% better generalization than few-shot approaches across diverse robotic control, manipulation, and navigation tasks. The proposed method eliminates the need for demonstrations in new tasks and enables interpretable generalization.

University of California, San Diego, Graduate Student Researcher 2022
• Contributed to the design of reward functions to guide discrete prompt generation for LLMs. The proposed RL-based prompt optimization approach outperforms a wide range of finetuning and prompting baselines on text classification and style transfer tasks.

University of California, San Diego, Graduate Student Researcher 2021-2022
• Designed and developed recurrent PPO and imitation learning agents for the Habitat visual navigation task to investigate how reinforcement learning and imitation learning algorithms generalize across environments, with support for parallel rollout collection and synchronous multi-environment training.

University of California, San Diego, Graduate Student Researcher

2020-2021

- Designed and developed a PPO agent that learns to understand physical concepts by mastering everyday skills.
- Designed and developed an embodied simulation environment with customizable materials and physical properties, along with a suite of tasks evaluating the agent’s physical understanding capabilities.

SKILLS

Programming Language: Python, C++, Matlab, Java, HTML, SQL

Machine Learning: Pytorch, Tensorflow, Numpy, Matplotlib, Wandb, Scikit-learn, Pandas

Reinforcement Learning: RLkit, RLlib, Garage, Stable-Baselines3, Tianshou, Gym, MuJoCo, PyBullet
